How to match codes on switch box and remote for RCSB

When you're using RCSB, you may face the following problems:
1. switch box or remote handset was out of work
2. lose the remote handset
3. several remote handset to control one switch box
4. one remote handset to control several switch box

Don't worry.　We have the self-learning system pre-installed in this product.　You just need to follow the steps below:
1. Power in the switch box and the indicator light on;
2. Put the battery in the remote battery box, the green light flashing means handset standby;
3. Press the 1st and 3rd button on the switch box together(see photo 1);

4. Press any button on the remote handset at the same time(see photo 2);
5. Wait a few seconds till all the lights flashing on switch box and remote handset, release the buttons.

Then the matching process finish, you can use the handset to control the switch box as usual.

● If you want to match 2nd remote handset, just follow the above step 2 to 5.　Then both 2 remote handsets can control the switch box.
● If you want one remote handset to control 2 switch boxes, just need to plug in the second switch box, follow the step 1, 3, 4 and 5.
● If you want to clear out the remote setting, press the 1st and 3rd button on the switch box together for 8 seconds until all the lights on the switch box flashing once.　There's no limitation on learning and clearing the code system on remote.
